S.N	1.1. Electrical cord, plug equipment and Power tool Safety Checklist	Compliance		Findings
		Y	N	
1	Are flexible cords free from damaged insulation, taped repairs, crimps, crushing and UV damage? [OSHA inspection points]			
2	Are flexible cords used on the job site of the properly rated and listed to support the load required?			
3	Are flexible cords used on the job site all equipped with grounded three-prong plugs or receptacles?			
4	Are flexible cord sets and portable receptacles NRTL tested and approved or fabricated and tested by a licensed electrician?			
5	Does all Electrical wires and cables extensions hangs overhead?			
6	Is all temporary electrical power equipment exposed to the outdoors properly rated?			
7	Are only Qualified Electrical Workers (as defined by OSHA and NFPA) allowed to install, connect and repair temporary wiring installations?			
8	Is there a record of monthly inspections of all cord and plug-type tools and equipment used on the job site? [Power Tool Safety Tips]			
9	Weather all electrical equipment's earthed already?			
10	Are there virtual connecting, overloading, overheating, or discoloring appearances existed on switch, plug or contactor and related terminals in the distribution box?			
11	Is the wiring of distribution box accorded with safety standards?			
12	Is the load accorded with safety standards in distribution box?			
13	Is there any available firefighting facilities surrounding?			
14	Are the common electrical warning signs available on the right place?			
15	Are all hand tools inspected for damage before each use, if damaged taken out of service?

S.N	1.2. Fall Protection Safety Checklist		Compliance		Findings
			Y	N	
1	Is there a written fall protection program based on analysis of the company's usual work tasks and hazards? **[OSHA Fall Protection Standards]**				
2	Is fall protection equipment selected based on a hazard analysis of the planned work, known hazards and specific work location?				
3	Are fall protection system inspected in accordance with the requirements outlined the fall protection program?				
4	Is fall protection equipment stored and maintained in accordance with the requirements outlined in the fall protection program?				
5	Are aerial lifts inspected prior to use and maintained in accordance with the manufacturer's recommendations for safe use of the equipment?				
6	Ladders	Scaffolds			
	1. Are employees using the ladders maintaining 3-points of contact/control while climbing the ladder?	1. Are scaffolds used at the work site designed and erected by a competent person?			
	2. Are workers at the edge of the well, pit shaft and similar excavation 6 feet deep or more, protected from falling by guardrail systems, fences, or barricades, personal fall protection equipment or covers?	2. Are scaffolds erected on level footings capable of supporting the intended loaded; and legs, poles, frames, and uprights bear on base plates and mud sills?			
	3. Are ladders properly stored when not in use?	3. Are scaffolds used at work site inspected and tagged after erection, and at least every 7			

		days thereafter by a competent person?			
	4. Are ladders inspected frequently and are those ladders that have developed defects withdrawn from service for repair or destruction and tagged or marked as “dangerous, Do not Use?”	4. Are mid-rails installed approximately halfway between the top-rail and the platform surface when using guardrails?			
	5. Are employees trained about proper ladder use?	5. Are supported scaffold platforms fully planked and decked with scaffold-grade material?			
	6. Are employees required to complete a ladder inspection before each use?	6. Has each employee who works on a scaffold been trained by a competent person on hazards and procedures used to control hazards?			
	7. Are ladders placed on a flat, secure surface?	7. Are Toe-boards in place on all working deck?			
	8. Are ladder rails extend at least three feet above top landing?	8. Are Horizontal and Vertical braces as per manufacturer guidelines?			
	9. Are ladders securely fastened to prevent sleeping?	9. Are Access ladders secured in place to top rung of scaffold?			
	10. Are aluminum ladders avoided if work must be done around electrical wires/power lines?	10. Are outriggers in place and foot seated on ground?

S.N	1.3. General Workplace Housekeeping Inspection Checklist	Y	N	
1	Are Stairways, Passageways, Ladders, Scaffolds, Ramps and Gangways kept free of material, supplies, and obstructions?			
2	Are materials kept at least 2m (5 ft.) from openings, roof edges, excavations, trenches, sumps, shafts?			
3	Is there adequate illumination for working?			
4	Are lamps or light sources working properly?			
5	Are warning signs in good condition and clearly visible even from afar?			
6	Are hoses, power cord, welding leads, etc., kept from lying in heavily travelled walkways?			
7	Are cords, cables and hoses neatly bundled up when not in use?			
8	Are machine and equipment guards in place and secure?			
9	Are tools in good condition and stored in their designated location?			
10	Are storage areas clean, tidy, and organized?			
11	Are storage racks in good condition?			
12	Are hazardous substances (Flammable materials, toxic substances) stored in appropriate containers, under appropriate conditions and marked to indicate they are hazardous?			
13	Are physical barriers and warning signs installed around workplace hazards?			
14	Are appropriate waste bins available for general waste, recyclable waste, hazardous waste, etc.?			
15	Is waste (Including hazardous waste) collected regularly?
